

November Math Update

8th Grade Algebra: Students will be spending the month of November writing and graphing linear equations in various forms. We will be using a variety of technological tools to investigate families of linear equations.

7th Grade Pre-Algebra: Students will be spending the month of November working on Chapter 5 – Rational Number Operations. In this chapter, students add, subtract, multiply, and divide fractions and mixed numbers. Students will write fractions and mixed numbers as decimals, and vice versa. They will also add, subtract, multiply, and divide decimals. Seventh graders will use these operations to solve real-world problems.

I am looking forward to meeting with you during conferences at the end of the month!
